Concepts of Programming Languages, CSCI 305, Fall 2021
Storage Management, Nov. 8
Section 3.2 Storage Management

1. Show the stack when execution reaches the ***.

```
main {
        char e, f, g;
        void fun1(n:int) {
                int m;
                m=n/2;
                if (n>1) {
                        fun1(m);
                } else {
                        fun3();
                }
        }
        void fun2() {
                fun1(4);
        }
        void fun3() {
                float d;
                ***
        }
        fun2();
}
```
