

Shooting Yourself in the Foot

C – Makes it easy for you to shoot yourself in the foot.

C++ - You accidentally create a dozen instances of yourself and shoot them all in the foot. P

(Providing emergency medical assistance is impossible since you can't tell which are bitwise copies and which are just pointing at others and saying, "That's me, over there.")

C# - You shoot yourself in the foot, but first have to switch to unsafe mode.

Scheme - You shoot yourself in the appendage which holds the gun with which you shoot yourself in the appendage which holds the gun with which you shoot yourself in the appendage which holds the gun with which you shoot...but none of the other appendages are aware this is happening.

SmallTalk - You spend so much time playing with the graphics and windowing system that your boss shoots you in the foot, takes away your workstation, and makes you develop in COBOL on a character terminal.
