**Database Design, CSCI 340, Spring 2016**
**Client Feedback, April 29**

Thank you for being willing to work with the students on a class project. The Computer Science Department appreciates your contribution to helping the students learn to work with clients and develop a product to a client's specifications. The students will provide you with a report on the database application which they developed, and the application itself. We are now looking for feedback on how the class project went from your perspective.

1. How satisfied are you with the finished product?

2. How would you rate the usability/appearance of the product?

3. How would you rate the functionality of the product?

4. How would you rate the robustness of the product?

5. How well do you expect the finished product meet your needs?

6. Did the students appear to be effective as a team?

7. Were the students responsive to your needs?

8. Do you have any suggestions for improving the process of student groups developing small database applications for clients?

Please write any additional comments that you have.

Thank you!
