

Software Engineering, EOSF322, Fall 2019
Chapter 6, Requirements Engineering, exercise, Sept. 27

1. For each of the following, indicate if this belongs in the elicitation, analysis, specification, validation or management phase.
 - a. Reviewing the documented requirements to correct any problems before the development group accepts them **validation**
 - b. Translating the collected user needs into written requirements and diagrams suitable for comprehension, review, and use by their intended audiences **specification**
 - c. Keeping project plans current with the requirements as they evolve **management**
 - d. Understanding user tasks and goals and the business objectives with which those tasks align **elicitation**
 - e. Decomposing high-level requirements into an appropriate level of detail **analysis**
 - f. Negotiating new commitments based on the estimated impact of requirements changes **management**
 - g. Tracing individual requirements to their corresponding designs, source code, and tests **management**
 - h. Deriving functional requirements from other requirements information **analysis**
 - i. Negotiating implementation priorities **analysis**
 - j. Identifying the product's expected user classes and other stakeholders **elicitation**
