

Carson & Jordan

Require requirements

Loop:

Validate requirements

Prototype with base application

Requirements revision

Write unit tests based on prototype and Requirements

Implement

DB test

Assume: DB APIs are separate

Example: Food pickup (client, lbs, data)

Unit tests

DB Unit

Unit test for display

Comparing xml to a master

Usability test

Compliance test/reports

Lucas & Michael

Begin

Mid

End

Database

Maybe?/probably no

Database	Backend (REST):	Front End
Maybe?/probably no	Test all REST (Unit) methods i.e. GET posts/1 return posts/1	Prototypes Usability test

	<p>Integration tests</p> <p>Regression tests</p>	<p>MVP – minimum viable product</p> <p>Integration tests</p> <p>Unit tests</p> <p>UI</p>
